Dual Output DC/DC Converter

DESCRIPTIONS

The 4000HN, dual output power modules are 30 to 40 watt DC/DC converters available in a dual output configuration providing both digital and analog outputs in a compact, industry standard 2" X 2" X 0.5" package. These converters are available in 12, 24 and 48 VDC inputs making them one of the most versatile product lines in the market with efficiencies up to 88%. Advanced surface mount construction allows these converters to achieve outstanding thermal performance eliminating the need for thermal potting compounds and thereby enhancing manufacturing efficiency to reduce costs.

OUTPUT VOLTAGE ADJUSTMENT (4000HN DUAL SERIES)

The converter's output voltage may be trimmed by up to $\pm 10\%$ of the nominal output voltage.

TRIM UP

Trim output voltage up by connecting an external resistor between Pins 6 and 9. Use the following equation, reference Table 1 for variable A.

$$\text{Radj-up} = \frac{A}{\Delta \%} - 16 \text{ (k}\Omega\text{)}$$

Example:

Trim 5% up for 12V Output units,
where $A = 1.79$, $\Delta \% = 0.05$

$$\text{Radj-up} = \frac{1.79}{0.05} - 16 = 19.8 \text{ k}\Omega$$

Both outputs trimmed up by 5%.

Table 1.

Output Voltage	A
$\pm 5V$	1.5
$\pm 12V$	1.79
$\pm 15V$	1.83

TRIM DOWN

Trim output voltage down by connecting an external resistor between Pins 4 and 9. Use the following equation, reference Table 2 for variables C and D.

$$\text{Radj-down} = \frac{C}{\Delta \%} - D \text{ (k}\Omega\text{)}$$

Example:

Trim 5% down for 5V Output units,
where $C = 4.5$, $D = 22$, $\Delta \% = 0.05$

$$\text{Radj-down} = \frac{4.5}{0.05} - 22 = 68 \text{ k}\Omega$$

Both outputs trimmed down by 5%.

Output Voltage	C	D
$\pm 5V$	4.5	22
$\pm 12V$	15.4	33
$\pm 15V$	20.2	38
